FOCUS TECHNOLOGY

February 2003-April 2010

PHP Web Developer for Focus technology account for the following clients:

I- National Democratic Institute of the United States. (NDI)   January 2005 - June 2006

Design software computer management of all electors in the Presidential Elections and Senate operations Haitian. **The software referred to as «Information and mapping of the Haitian elections management system» (SigceH).**

- Ensure the inscriptions of four million voters in various polling stations with photos and fingerprints. Ensure the treatment of the information of the 500 candidates to the Senate and 25 candidates for the Presidency of all political parties. The **SigceH** managed the entire process upon registration on the electoral rolls until the **publication of the results of the elections**.

- Among other features, it allows the chronological registration of users, the exchange of data between several sites, the management of the electoral districts through the automatic creation of the polling stations.

- The SigceH allows the production of election documents, the list of deregistered by Department and region. It also shows the list of the duplicates and mapping system allows the Administrative Division on map and the location of polling stations.

- Manage trends and the results of the election in real time or even put online the electoral file for consultation. In addition, the software is reusable.

- It allows the chronological record of transactions, so that we can at any time see who did what, as well as the export and import of data.

- Is a software that is very well secured that on the one hand, some users have access to a certain level. If you want, we can trace the history of what has been done, by whom, where and when.

- Participate in the Scrums and interact with a dynamic team;

- Documenting requirements, guides users, etc.

Technological environment
PHP, Pear, HTML, Linux, Apache, Visual Basic 6.0, Oracle, HTML, Excel, JavaScript, Visio, MS-Project. Development posts Windows XP, test environment on Linux deployment in production on Linux and Windows Server 2003

DIGICEL July 2006 - April 2010
Programmer PHP, Integrator

- Integrate the application of Telecommunications Davinci and Radiant technologies.
- Support users (level 2), apply updates, deploy across the country;
- Prepare scripts under Pervasive SQL Server and prepare for deployments in 41 stores;
- Analyze, estimate, develop and evolve both WEB and Windows applications (VB, Excel, etc.);
- Documenting, develop test scenarios;
- Setting applications.

Technological environment

PHP, Java, Eclipse, Counterpoint, Pervasive SQL Server 2005, Crystal Report, Excel, MS Project, Silverlight 4.0, Visio, Linux Gentoo, Solaris, SAP.

SALES Law firm February 2003 - 2004

Programmer PHP / VBA (team RAD)

By request of the different lines of business of the law firm lawyer with 25 lawyers and lawyers.

- Analyze needs, assess priorities and draft proposals for work to be done;
- Produce custom Web applications: forms, reports (PHP, Access, Crystal Report, Excel, PDF, PHP Report...), ad hoc queries, and others;
- Prepare scripts under MYSQL server and prepare for deployments;
- Provide support to users, identify the needs of changes that must be made in applications management of accounts receivable, the Interventions to the courts, TimeSheet schedules;
- Reuse objects from the team of developers including the Framework and share code;
- Documenting, develop test scenarios, and schedule updates in production;
